

1. Document objective

This document describes the primary users of ClinicOS, their needs, goals, pain points, and expected interactions with the system.

The personas serve as a basis for:

- defining features;
- creating workflows;
- managing permissions;
- database modeling;
- interface development.

2. System user structure

ClinicOS uses an organization-based model.

An account can have one or multiple clinics.

3. Overview of profiles

Profile	Primary objective	Frequency of use
Administrator	Manage the clinic and monitor results	Daily
Receptionist	Organize schedule and client service	Ongoing
Physician	Patient Attendant and Registrar Information	Log
Account owner	Manage subscriptions and units	Occasionally

PERSONA 01 — Account Owner

Fictitious name: Carlos Mendes

Role: Owner of a group of clinics.

Context: Carlos owns one or more clinics and is looking for a single platform to monitor all locations.

He does not want to manage the details of daily appointments but needs an overview of the business.

Goals

- Maintain control over all clinics.
- Track performance.
- Reduce operational costs.
- Standardize processes.
- Grow without changing systems.

Key pain points

- Each location operates differently.
- Lack of centralized information.
- Outdated systems.
- Difficulty tracking results.

Needs

Needs to view:

- number of appointments;
- patient growth;
- registered doctors;
- schedule occupancy;
- status of locations.

Features used

- **Management**
 - Create clinics;
 - Manage plans;
 - Manage permissions;
 - View general metrics.

Main workflow

PERSONA 02 — Clinic Administrator

Fictitious name: Mariana Silva

Role: Administrative Manager.

Context: Mariana is responsible for the clinic's day-to-day operations. She coordinates receptionists, doctors, and internal processes.

Goals

- Keep the clinic organized.
- Ensure the schedule runs smoothly.
- Oversee the team.
- Avoid errors.

Key pain points

- Many manual tasks.
- Lack of organization.
- Difficulty staying informed about current operations.
- Reliance on spreadsheets.

Needs

Needs to:

- register users;
- manage permissions;
- monitor the schedule;
- check performance indicators.

Features used

- **Dashboard**
 - Appointments for the day;
 - New patients;

- Active doctors;
- Alerts.
- **Configuration**
 - Clinic details;
 - Users;
 - Permissions;
 - Schedules.

Main workflow

PERSONA 03 — Receptionist

Fictitious name: Ana Oliveira

Role: Receptionist.

Context: She is the person who uses the system most frequently throughout the day. She needs to perform tasks quickly.

Goals

- Schedule appointments quickly.
- Avoid scheduling conflicts.
- Provide better service to patients.
- Keep data up to date.

Key pain points

- Confusing schedule.
- Delayed registration.
- Too many different systems.
- Scheduling errors.

Needs

I need to:

- search for patients quickly;
- create appointments;
- confirm times;
- view the schedule.

Features used

- **Patients**
 - Create registration;
 - Edit data;
 - Search history.
- **Schedule**
 - Create appointment;
 - Change time;
 - Cancel;
 - Confirm.

Main workflow

PERSONA 04 — Physician

Fictitious name: Dr. Rafael Costa

Role: Specialist physician.

Context: Uses the system primarily during patient consultations.

Does not want to waste time on administrative tasks.

Goals

- Treat patients.
- Have organized information.
- Quickly review medical history.

Key pain points

- Scattered information.
- Limited time.
- Difficult-to-use medical records.

Needs

Needs to:

- view schedule;
- access patient information;
- record notes;
- review medical history.

Features used

- **Schedule**
 - Day's appointments;
 - Upcoming patients.
- **Patients**
 - History;
 - Key data.
- **Consultation**
 - Record notes;
 - Create summary.

Main workflow

4. Permissions matrix

Legend

- C = Create
- R = Read
- E = Edit
- D = Delete

Resource	Owner	Administrator	Reception	Doctor
Clinics	C/E	R	-	-
Users	C/E	C/E	-	-
Patients	R	C/E/D	C/E/D	R
Doctors	R	C/E/D	R	-
Schedule	R	C/E	C/E	R
Appointments	R	C/E	C/E	E
Dashboard	R	R	R	R
Settings	R	E	-	-

5. Overall user journey

- **Reception:** Schedule → Patients → Appointments
- **Doctor:** Schedule → Patient → Consultation
- **Administrator:** Dashboard → Management → Settings

6. Princípios de UX baseados nas personas

O ClinicOS deve seguir:

Simplicidade: Um recepcionista deve conseguir marcar uma consulta sem treinamento longo.

Velocidade: As ações mais comuns precisam ter alguns passos.

Exemplo: Criar consulta:

Clarity: Each user should see only what they need.

Personalization: The system must adapt the experience according to the user's role.

Conclusion

ClinicOS will be built for four main profiles:
