

1. General Information

- **Product Name:** ClinicOS
- **Category:** Clinical management SaaS
- **Business Model:** Software as a Service (monthly subscription)
- **Initial Target Audience:** Small, modern clinics (2 to 10 employees)
- **Operational Model:** Multi-clinic (one account can manage multiple clinics/locations)

2. Product Summary

ClinicOS is a modern clinic management platform that centralizes patients, doctors, appointments, and administrative processes within a single environment.

The goal is to replace outdated, complex systems with a simple, beautiful, and intelligent experience, enabling small clinics to organize their workflows, save time, and provide more professional care.

3. Problem Solved

Small clinics often face issues such as:

- disorganized schedules;
- scattered patient information;
- excessive manual tasks;
- difficulty tracking operations;
- outdated, unintuitive systems;
- lack of integration between administrative and medical staff.

4. Proposed Solution

ClinicOS offers:

- a centralized schedule;
- smart patient registration;
- doctor management;
- appointment organization;
- administrative overview of the clinic;
- automation to reduce repetitive tasks;
- AI features to assist teams.

5. Value Proposition

"ClinicOS transforms small clinic management into a simple, modern, and intelligent experience."

6. Competitive Advantages

Superior Experience

The system will be developed with a focus on:

- a modern interface;
- ease of learning;
- minimal steps to complete tasks;
- an experience similar to modern SaaS products.

Automation

Reduction of manual work through:

- automatic organization;
- reminders;
- notifications;
- streamlined processes.

Artificial Intelligence

Future features:

- history summaries;
- assistance with record-keeping;
- information organization;
- administrative insights.

Smart Management

Administrators can track:

- appointments;
- patients;
- capacity/occupancy;
- clinic performance.

7. Target Audience

Primary client: Small clinic owner

Characteristics:

- has a small team;
- wants to professionalize service delivery;
- does not want complicated systems;
- values appearance and practicality.

8. System Users

Administrator

Responsible for:

- configuring clinics;
- managing users;
- tracking metrics;
- managing the subscription.

Receptionist

Responsible for:

- registering patients;
- managing the schedule;
- confirming appointments;
- organizing patient flow.

Doctor

Responsible for:

- viewing the schedule;
- accessing patient records;
- recording information;
- tracking consultations.

9. Objective of the first version

To create a functional solution capable of serving a small clinic.

V1 will include:

- Registration and authentication
- Clinic management
- Users and permissions
- Patients
- Doctors
- Schedule
- Appointments
- Dashboard

10. Product future

ClinicOS could evolve to include:

- Clinical AI;
- advanced automation;
- patient communication;
- smart reporting;
- financial management;
- external integrations;
- mobile app.
